

British Journal of Clinical Pharmacology Call for Papers: COVID-19

British Journal of Pharmacology opens a call for papers dealing with **clinical and translational pharmacology of drugs for COVID-19** in the broadest sense of the word. Papers can be original studies, reviews, short communications, and letters to the editor about this subject.

The purpose of this specific call for papers is to announce that the journal will offer a **fast-track peer review for exceptionally high-quality and high-impact papers, free of charge**. Members of the journal's editorial board will determine if a paper indeed qualifies as such as paper and each submitting author will be informed about the qualification within 1-2 days after submission. Other papers will still be sent out for review if deemed of sufficient merit.

All COVID-19 papers accepted will be made available as free-to-read upon publication, with no cost to the author.

Papers in review will be available online through the journal's publisher's partner Authorea (<https://authorea.com>) and will be become available online on BJCP's website as accepted papers immediately after acceptance. Papers will subsequently be officially published in the next available issue of the journal. All COVID-19 related papers will be published in a continuously growing Virtual Themed Issue of the journal.

Guidelines for Authors
